# **STORMWATER REPORT NARRATIVE**

## **190 WASHINGTON STREET RE-DEVELOPMENT**

*April 12, 2023*

### **Introduction:**

Marchionda & Associates, L.P. has completed a storm water analysis for the re-development project proposed at 190 Washington Street in Westwood, Massachusetts. The purpose of this report is to offer information on the stormwater characteristics of the site in its existing and post construction condition.

For additional information regarding the site's existing conditions and the stormwater management system reference is made to the following plans and report;

- *Site Development Plans  
190 Washington St., Westwood, MA  
Owner: Skye Realty Management, LLC  
Prepared by; Marchionda & Assoc., L.P.  
Dated; April 12, 2023*

### **Existing Conditions:**

The project site is located on the southeast side of the public way Washington Street in Westwood approximately 100 feet southwest of Wentworth Street. The property has a land area of 14,086 s.f. and is presently the site of a commercial office building with a bituminous concrete parking area. The property is presently accessed with two curb cuts onto Washington Street. The existing surface of the site is almost entirely made of impervious surfaces. The building, parking area and walkways amount to 12,100 s.f or 86% of the site.

The site abuts residential properties to north, south, and east. No areas of the site are located within a buffer zone to a wetland a resource area or a designated flood hazard area.

The majority of the stormwater from the existing site flows overland to a catch basin drywell in the existing parking area. A small portion of the property outside the perimeter of parking area flows either east to abutting properties or onto the Washington Street right of way and the municipal drainage system. Refer to the

**April 12, 2023**

existing conditions plan in project site plans for specific information on the existing topography and features of the site.

Existing soils on the site have been recently explored by Marchionda & Associates. The observation holes revealed imported filled soils over gravelly loamy sands soils. Information on the site's soils has been included in appendix of the report.

### **Project Description:**

The project consists of the renovation of the existing commercial use building and bituminous concrete parking lot. The development will include additions to the existing structure and will have a 2,285 s.f building footprint once completed. The parking area and drive aisles will be redesigned to provide a 13-car parking area and walkways to support the development.

The construction will require mostly shallow excavation and surface preparation and will be take place in areas that have been previously disturbed. Deeper excavations will be required in the areas of the proposed building additions and utilities. Based on the soil exploration preformed some exporting of unsuitable subsoils may be required.

When completed the development will have approximately 10,600 s.f. of impervious surfaces. This will result in a reduction of approximately 1,500 +/- s.f. of impervious surfaces. The remaining open space areas will be made up of manicured grass and landscape areas.

A comprehensive stormwater management system will be constructed to manage stormwater run-off generated by the project. This system will be made up a deep sump catch basin and an underground infiltration chamber system. All of the impervious surfaces on the property will drain to the new stormwater management system. Detailed information on the components of the system is included in the project's site plans.

### **Project Type:**

The project will take place in areas previously disturbed. For purposes of stormwater management standards this project is considered a redevelopment project.

April 12, 2023

**LID Measures:**

When possible environmental sensitive site design and LID techniques have been used in the planning of the project. No construction will be required to take place within a wetland resource or buffer zone. All of the proposed construction will be located in areas previously disturbed by the existing facility.

**Stormwater Management Standards Compliance:**

A description of how this project meets the DEP stormwater standards, along with supporting documentation, is provided herein:

**Standard 1:** *No New Untreated Stormwater Discharges*

No new point source discharges will be created. The project has been designed to recharge a large portion of the storm water flows generated by the project.

**Standard 2:** *No Increase in the Post-Development Peak Discharge Rate*

Peak flow rates were studied under existing and proposed conditions for 2-year, 10-year, 25-year, and 100-year, 24-hour Type III storm events. Two study points (1 & 2) as shown in Figures 1 and 2 and as described below were developed to analyze runoff rates from the project site to the receiving wetland. The subcatchment watersheds to each study point were then delineated for the pre- and post-development conditions.

Study Point “1” represents the portion of the project that drains to the abutting properties to the east.

Study Point “2” represents the portion of the site that drains to the southwest to Washington Street and the municipal drainage system.

In terms of the modeling methodology, Technical Release 55 (TR-55) was utilized to obtain weighted curve numbers (CNs) for each of the pre- and post-development subcatchment areas. Inputs for obtaining the weighted CNs were based on ground cover type and hydrologic soil groups (HSGs). TR-55 was also utilized to obtain times of concentration (TCs) for each of the pre- and post-development subcatchment areas. Flow paths were generally broken into segments of sheet flow and shallow concentrated flow. Refer to attached TR-55 TC data (Appendix 1).

April 12, 2023

CNs and TCs obtained from TR-55 were input into the *Hydraflow*® Hydrographs software package, which utilizes the National Resources Conservation Service (NRCS) method to generate and route hydrographs.

As shown in the attached modeling output and as summarized in Table 1 (below), the peak runoff rate from the site in the proposed conditions for the design storms at the study points show an overall reduction in peak flows from the site.

**TABLE 1: PEAK RUNOFF RATES FROM THE SITE AT EACH STUDY POINT**

Study Point	2-yr storm event (3.24"/24-hr)		10-yr storm event (4.90"/24-hr)		25-yr storm event (6.21"/24-hr)		100-yr storm event (8.91"/24-hr)	
	Pre (cfs)	Post (cfs)	Pre (cfs)	Post (cfs)	Pre (cfs)	Post (cfs)	Pre (cfs)	Post (cfs)
<b>1</b>	<b>1.0</b>	<b>0.0</b>	<b>1.5</b>	<b>0.0</b>	<b>1.9</b>	<b>0.1</b>	<b>2.2</b>	<b>0.8</b>
<b>2</b>	<b>0.1</b>	<b>0.1</b>	<b>0.1</b>	<b>0.1</b>	<b>0.1</b>	<b>0.1</b>	<b>0.1</b>	<b>0.1</b>

**Standard 3: Loss of Annual Recharge**

DEP’s *Stormwater Management Handbook* prescribes an infiltration volume based on the hydrologic soil group over which impervious area will be constructed as follows:

- HSG A – 0.60 inches of runoff
- HSG B – 0.35 inches of runoff
- HSG C – 0.25 inches of runoff
- HSG D – 0.10 inches of runoff

The proposed construction will include both the creation and removal of impervious surfaces. It appears from soil mapping and on-site soil observation that the entire project area is made up of soils that are considered to be in the hydrologic soil group “A”.

A large portion of the stormwater run-off generated from the proposed impervious areas will be routed to the recharge system and will infiltrated into the soils within the project site. As a result, the proposed construction will meet and exceed the requirements for the loss of groundwater recharge.

April 12, 2023

**Standard 4:** *Water Quality*

The project will maintain access drives and a parking area that will generate suspended solids. The project will however slightly reduce the area of paved surfaces from the present condition. By reducing the area of pavements the proposed development will reduce the amount of total suspended solids (TSS) generated. The project will also provide Stormwater Best Management Practices (BMP's) that will further reduce Total Suspended Solids generated for the site. The TSS removal BMP's proposed for the project include a hooded deep sump catch basin that will drain into an infiltration chambers system.

A *Long-Term Stormwater Operation and Maintenance Plan & Pollution Prevention Plan* (Appendix 4) has been developed for the project to comply with this requirement and the requirements of Standard 9.

**Standard 5:** *Land Uses with Higher Potential Pollutant Loads*

Not applicable – this project does not propose a land use with a higher potential pollutant load.

**Standard 6:** *Discharges within a Zone II or Interim Wellhead Protection Area*

The project site does not fall within a Zone II of a public water supply.

**Standard 7:** *Redevelopment*

This project is considered a redevelopment project as defined in the DEP *Stormwater Management Handbook*. As allowed, Standards 2, 3, & 4 are met to the extent practical.

**Standard 8:** *Construction-Related Impacts*

A Construction Period *Erosion & Sedimentation Control Plan* has been developed for the project. The project is not subject to the National Pollutant Discharge Elimination System (NPDES) program of the United States Environmental Protection Agency, as it will not involve greater than one acre of land disturbance.

April 12, 2023

**Standard 9:** *Long-Term Operation and Maintenance*

A *Long-Term Stormwater Operation and Maintenance Plan & Pollution Prevention Plan* has been developed for the project to comply with this requirement and the requirements of Standard 4. A copy of this plan has been included in the appendix of the report.

**Standard 10:** *Illicit Discharges*

DEP does not permit illicit discharges, defined by 310 CMR 10.04 as follows, to the stormwater management system:

*“Illicit discharge means a discharge that is not entirely comprised of stormwater. Notwithstanding the foregoing, an illicit discharge does not include discharges from the following activities or facilities: firefighting, water line flushing, landscape irrigation, uncontaminated ground water, potable water sources, foundation drains, air conditioning condensation, footing drains, individual resident car washing, flows from riparian habitats and wetlands, dechlorinated water from swimming pools, water used for street washing and water used to clean buildings without detergents.”*

Prior to the discharge of stormwater runoff to the post-construction stormwater system it shall be the project owner’s responsibility to prepare an Illicit Discharge Compliance Statement in accordance with Standard 10 certifying that no illicit discharges exist on the site.

## MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:25,000.

**Warning:** Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service  
 Web Soil Survey URL:  
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Norfolk and Suffolk Counties, Massachusetts  
 Survey Area Data: Version 18, Sep 9, 2022

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: May 22, 2022—Jun 5, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

<b>Totals for Area of Interest</b>			<b>1.9</b>	<b>100.0%</b>

### Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

### Rating Options

*Aggregation Method:* Dominant Condition

*Component Percent Cutoff: None Specified*

*Tie-break Rule: Higher*

## Norfolk and Suffolk Counties, Massachusetts

### 628C—Canton-Urban land complex, 3 to 15 percent slopes

#### Map Unit Setting

*National map unit symbol:* vktb  
*Elevation:* 0 to 1,000 feet  
*Mean annual precipitation:* 32 to 54 inches  
*Mean annual air temperature:* 43 to 54 degrees F  
*Frost-free period:* 120 to 240 days  
*Farmland classification:* Not prime farmland

#### Map Unit Composition

*Canton and similar soils:* 70 percent  
*Urban land:* 20 percent  
*Minor components:* 10 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

#### Description of Canton

##### Setting

*Landform:* Ice-contact slopes  
*Landform position (two-dimensional):* Shoulder  
*Landform position (three-dimensional):* Side slope  
*Down-slope shape:* Convex  
*Across-slope shape:* Convex  
*Parent material:* Friable coarse-loamy eolian deposits over loose sandy and gravelly ablation till

##### Typical profile

*H1 - 0 to 3 inches:* fine sandy loam  
*H2 - 3 to 18 inches:* fine sandy loam  
*H3 - 18 to 60 inches:* gravelly loamy sand

##### Properties and qualities

*Slope:* 3 to 8 percent  
*Depth to restrictive feature:* 18 to 36 inches to strongly contrasting textural stratification  
*Drainage class:* Well drained  
*Runoff class:* Low  
*Capacity of the most limiting layer to transmit water (Ksat):* High (2.00 to 6.00 in/hr)  
*Depth to water table:* More than 80 inches  
*Frequency of flooding:* None  
*Frequency of ponding:* None  
*Available water supply, 0 to 60 inches:* Very low (about 2.7 inches)

##### Interpretive groups

*Land capability classification (irrigated):* None specified  
*Land capability classification (nonirrigated):* 2e  
*Hydrologic Soil Group:* A

*Ecological site:* F144AY034CT - Well Drained Till Uplands  
*Hydric soil rating:* No

### **Description of Urban Land**

# **APPENDIX 3**

## **Standard 4 (TSS)**

Location: 190 WASHINGTON ST., WESTWOOD

TSS Removal  
Calculation Worksheet

A BMP	B TSS Removal Rate	C Starting TSS Load*	D Amount Removed (BxC)	E Remaining Load (C-D)
DEEP SUMP CATCH BASIN	25%	1.00*	0.25	0.75
INFILTRATION CHAMBERS	80%	0.75	0.60	0.15
Total TSS Removal =			0.85	85%

Project: 190 WASHINGTON ST.  
 Prepared By: STB  
 Date: 4/24/23

\* Equals remaining load from previous BMP (E) which enters the BMP

# **APPENDIX 4**

## **Operation & Maintenance Plan**

**OPERATION AND MAINTENANCE**  
**&**  
**LONG TERM POLLUTION PREVENTION PLAN**  
**FOR POST-CONSTRUCTION STORM WATER CONTROLS**

**190 WASHINGTON STREET**  
**WESTWOOD, MASSACHUSETTS**  
 April 12, 2023

**GENERAL**

The Best Management Practices (BMPs) used in the design of the 190 Washington Street project were chosen for their effectiveness at reducing peak discharge and infiltrating groundwater. Routine maintenance is required for the BMPs, as proper maintenance is essential in achieving the desired result of improved water quality. This Operations and Maintenance (O&M) and Long Term Pollution Prevention Plan (LTPPP) is intended to cover the post-construction maintenance of the permanent BMPs<sup>1</sup> and site specific pollution prevention.

**MAINTENANCE REQUIREMENTS**

Qualified personnel shall inspect all components of the stormwater management system as outlined below. To be considered “qualified”, personnel should have a working knowledge of the maintenance requirements of storm water BMP’s and must be approved by the Westwood DPW. Qualified personnel shall be responsible for overseeing the required inspections and shall file annual reports with the town of Lawrence officials. Additionally, a copy of the Inspection/Maintenance Log, as further described herein, shall be provided to town of Lawrence officials on an annual basis.

**SUMMARY OF MAINTENANCE REQUIREMENTS**

<b>BMP</b>	<b>MIN. FREQUENCY</b>	<b>RESPONSIBLE PARTY</b>
Drive and Parking Area Sweeping	once/quarter	<i>Skye Realty Management, LLC</i>
Trash Removal	Inspect once/month Clean as necessary	<i>Skye Realty Management, LLC</i>
Catch Basin	Inspect 4x/year Clean once/year	<i>Skye Realty Management, LLC</i>
Infiltration Chambers	Inspect Once/year Maintain as necessary	<i>Skye Realty Management, LLC</i>

<sup>1</sup> Operations and maintenance of temporary erosion and sedimentation controls utilized during construction will be covered by a *Stormwater Pollution Prevention Plan* as required by the National Pollutant Discharge Elimination System program of the Environmental Protection Agency, and is not part of this O&M Plan.

**OPERATION AND MAINTENANCE AND  
LONG POLLUTION PREVENTION PLAN FOR  
POST-CONSTRUCTION STORMWATER CONTROLS  
190 WASHINGTON STREET**

April 12, 2023

**RESPONSIBILITY TO ADMINISTER O&M PLAN**

During construction, the general contractor will be responsible for maintaining the stormwater management system in accordance with this O&M Plan until such time that ownership of the project or phases thereof are turned over to the owner. The owner is then responsible for maintaining the portions of the stormwater management system under their ownership in accordance with this O&M Plan. This section below (names and signatures) shall be updated with every change in ownership and/or person(s) responsible for administering/financing the O&M of the system.

Owner(s) of the stormwater management system:

Name: \_\_\_\_\_ Name: \_\_\_\_\_

Signature: \_\_\_\_\_ Signature: \_\_\_\_\_

Person(s) responsible for financing maintenance and emergency repairs:

\_\_\_\_\_  
\_\_\_\_\_

**INSPECTION AND MAINTENANCE LOG**

A sample inspection and maintenance log to be used is attached to the end of this O&M Plan. At a minimum, any inspection and maintenance log used shall include the following items:

- Date activity performed
- Specific inspection/maintenance task
- Structural components inspected/maintained
- Staff person or contractor performing activity
- Supervisor verification of maintenance activity
- Recommended additional maintenance tasks

An Annual Report shall be submitted to the Town of Westwood to meet the requirements of the town's Stormwater Management and Erosion Control Regulations.

**OPERATION AND MAINTENANCE AND  
LONG POLLUTION PREVENTION PLAN FOR  
POST-CONSTRUCTION STORMWATER CONTROLS  
190 WASHINGTON STREET**

April 12, 2023

**PROPOSED BMPS AND CORRESPONDING O&M REQUIREMENTS:**

**DRIVEWAY and PARKING AREA SWEEPING:**

Sweeping of impervious surfaces shall be conducted once per quarter. All sweepings shall be handled and disposed of in accordance with applicable local, state and federal guidelines and regulations.

**TRASH REMOVAL:**

The field areas shall be inspected for litter and trash monthly as part of overall site maintenance. Any accumulated trash, litter and discarded materials in these areas shall be removed.

No disposal of materials will be permitted within the landscaped areas or wooded areas on the Site. This prohibition applies to trash, fill material, construction debris, grass clippings, collected leaves and cut branches.

**CATCH BASIN:**

The catch basin shall be inspected four times per year for build-up of sediment, oil, and/or other debris which could decrease the effectiveness of the sumps. A qualified company specializing in the cleaning of catch basins shall perform the inspection of catch basins.

Typically a dipstick tube equipped with a ball valve, such as a Sludge Judge<sup>®</sup>, is used to measure the approximate oil and sediment depth, and a vacuum truck is used to clean out the catch basin. Catch basins shall be cleaned once per year, or sooner if the depth of sediment is found to reach 12 inches. If visual inspection observes any evidence of hydrocarbons, the material shall be immediately cleaned and disposed in accordance with all applicable local, state and federal guidelines and regulations.

As part of the inspection, catch basins should be inspected for structural soundness. Hoods and associated hardware should be inspected to ensure that they are correctly attached and functioning properly. Catch basins shall be repaired or replaced as necessary to ensure proper operation.

Frames and grates should be inspected and repaired or replaced as necessary to ensure proper operation.

**Budget for Catch Basin Inspections and Maintenance: \$1,000/year**

**OPERATION AND MAINTENANCE AND  
LONG POLLUTION PREVENTION PLAN FOR  
POST-CONSTRUCTION STORMWATER CONTROLS  
190 WASHINGTON STREET**

April 12, 2023

INFILTRATION CHAMBERS:

The project includes a roof drainage recharge system comprised of 15 HDPE infiltration chambers. The system includes clean out junction manholes and observation ports located in the chambers.

It is important to occasionally inspect the system to ensure that it remains clear of any debris and sediment. This will help to ensure that trenches will continue to function efficiently long term.

To accomplish this, the system should be inspected once every year. A stadia rod should be used to measure the depth of sediment in the chambers. Should the depth of sediment exceed six inches the basin(s) should be cleaned of the sediment. In the event that the system would need to be cleaned, a culvert cleaning nozzle such as a JetVac<sup>®</sup> is recommended.

**Budget for Chamber Inspections and Maintenance: \$1,000/year**

LONG TERM POLLUTION PREVENTION:

*MAINTENANCE OF LANDSCAPED AREAS:*

Fertilizers used for landscaping and lawn areas shall be slow release, low-nitrogen types (<5%) and shall not be used within 25 feet of a wetland resource area, and pesticides/herbicides shall not be used within 100 feet of a wetland resource area. Furthermore, the use of any fertilizers, pesticides, and herbicides shall be in accordance with the manufacturer's recommendations.

*WINTER MAINTENANCE OF WALKS AND DRIVES:*

Snow storage shall take place on pervious surfaces to the extent practicable to allow the snowmelt to filter through the soil, leaving behind sand and debris that can be removed in the springtime. Snow shall not be stockpiled in drainage collection areas or conveyance channels as this may block the system causing flooding. Furthermore, snow shall not be stored in or within 25 feet of a wetland resource area. No road salt, sodium chloride, or other deicing chemicals shall be used on paved surfaces within 25 feet of a wetland resource area.

190 WASHINGTON STREET**

April 12, 2023

*STORAGE OF WASTE PRODUCTS:*

Any outdoor storage of waste products shall be covered to prevent rainfall from picking up contaminants from the waste. This requirement shall include any dumpster(s) which shall have the lid(s) closed when not being loaded or unloaded.

*ILLICIT DISCHARGES:*

There shall be no illicit discharges to the stormwater management system. Illicit discharges are defined by 310 CMR 10.04 as follows:

*“Illicit discharge means a discharge that is not entirely comprised of stormwater. Notwithstanding the foregoing, an illicit discharge does not include discharges from the following activities or facilities: firefighting, water line flushing, landscape irrigation, uncontaminated ground water, potable water sources, foundation drains, air conditioning condensation, footing drains, individual resident car washing, flows from riparian habitats and wetlands, dechlorinated water from swimming pools, water used for street washing and water used to clean residential buildings without detergents.”*

Prior to the discharge of stormwater runoff to the post-construction stormwater best management practices, an Illicit Discharge Compliance Statement shall be submitted to the Lawrence Planning Board verifying that no illicit discharges exist on the site.

**EMERGENCY SPILLS**

The owner shall provide personnel with a list of emergency contact phone numbers to use to report a spill. At a minimum the list should include the DEP Emergency Response Section, an environmental cleanup contractor such as Clean Harbors, Inc., the Lawrence Fire Department, and a contact person/phone number for the owner:

- DEP Emergency Response   **1(888)304-1133**
- Clean Harbors, Inc.       **1(800)645-8265**
- Westwood Fire Department   **911 or (781)-320-1000**
- Owner (*Skye Realty Management, LLC*)

While the above-listed phone numbers are current as of the writing of this O&M Plan, the owner shall be responsible for verifying these numbers prior to distribution to the homeowners. Additionally, the owner shall update and redistribute a list of emergency contact phone numbers to the homeowners every other year, or sooner should any changes occur.
